ABSTRACT

Travel websites have become one of the most influential tools in travel planning and they have been commonly used in today's travel world as access to the internet has become easier and more widespread thanks to technological advancements. Due the pandemic that hit the world on 2020 that is covid-19 the tourism and economy was widely affected. The daily income of people associated with those businesses were also affected and got shut due to it.

As everything is getting back to normal one of the most efficient way of rising the economy of India is tourism. India attracts many tourists due to its diversity and secularism. keeping in mind the covid situation and its safety measures our website offers a whole bunch of planning task on a single page. Here the person can explore the unexplored places of India which is great for reducing the crowds at a single place also one can explore the famous places if they wish around the area they currently are from our website.

It also provides the statistics of covid cases and situation of that place for safety measures. We also provide the vaccination booking for those are not yet fully vaccinated.

Along with it we provide all the necessary things one needs to plan for a journey like weather forecast, hotel booking, flight booking, train booking, bus booking, navigation/maps.

Keywords: e-tourism, hidden gems, tourist, India, booking, vaccination, vacation, travel, Html, CSS, JavaScript

INTRODUCTION

People have always travelled for some basic purposes throughout the history of humanity. However, thanks to advancements in modern technology, the number of people travelling has increased. As a consequence of that, planning travels have started to be a more complex task which needs investing more time or sometimes more money in today's modern world. Travellers have started to give more priority to having quality and the latest information about the products and services that they intend to consume. Because travellers know that if their travels are not planned appropriately using appropriate tools, they may have to satisfy with poor quality products and services as well as suffering from many other unexpected sufferings in their travel experiences

For long years, it had been a traditional practice for tourists to go to the offices of travel agencies and consult about their upcoming travels as all facilities and knowledge regarding the upcoming travel are in the hands of agencies, and thus travel agencies used to control many travel-related tasks such as organising transportation and accommodation for the consumers. As such traditional travel agencies had limited contact with their suppliers due to insufficient technological tools, the services and products supplied by these agencies for the consumers also had to be limited. However, in today's digital world in which the use of internet-based services in the travel business has been becoming more and more common, travels offer much more options for consumers. As the number of hotels, restaurant and airline services have increased, it has become a more difficult task for travellers to appropriately and effectively plan their travels employing such tools.

The easiness and the comfort of travelling in today's world are closely related to and dependent on the advancement in technology. The advancements in technology have already replaced traditional travel agents, and online travel agents have emerged. As a consequence of that, many other technology-integrated novelties have come into use in the travel sector such as mobile phones and digital guides. With these advancements and with the integration of

technology into the travel business, it has become easier for the internet users to do a search and find the information that they need on the web. The experts that see this advancement in the internet have started to offer advertisements appeealing to travellers to encourage them to specifically consume their products or services. This also made travel planning a confusing and tricky task for travellers.

After all these, travel marketers are not the only source of information anymore because travellers share their travel-related experiences with others on the internet, and other people benefit from such information to plan their upcoming travels and to guarantee their pleasure from their travel. With the increase in the amount of information generated by travellers, a new network has emerged, which has been named as travel websites. Travel websites have some positive and negative effects on travellers' travel planning. However, the number of studies examining such positive and negative effects is very limited in the relevant literature. on the factors motivating internet users for sharing information on social media, electronic world of mouth and trustworthiness of online information Aiming similar purposes with the studies mentioned above, this study intends to fill the gap in the relevant literature exploring what travel website is and the possible impacts of travel websites on the travel planning of travellers.
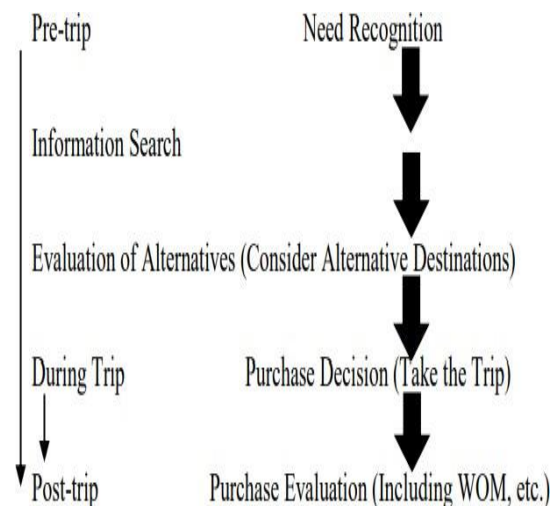

METHODOLOGY:

The flow of the website is as follow:

The home page of the website describes the content we offer to the visitors along with the button to discover more about the places of India to travel, which leads to the page where user can select the which part out of four of India, he/she wants to visit. After selecting the part of India, we give the option of which part they want to explore the famous or unexplored ones. The list of places and their images and information gives an overview of that place to the user.

Next on the home page one can access the contact page to contact us on any query or your valuable reviews. Followed by the footer which contains the information of website creators.

Next on the home page one can access the navigation bar which contains various features and facilities for the traveler/tourists. The user button enables the user to signup/login to our website.

 The Transport option leads to the page which gives three options to travel by air/train or bus.
The hotels options lead to the hotel booking website.

The weather option gives the weather forecast of any place in India.

The navigation option can be used by user at the tourism place to search the locations nearby.

The covid-19 option shows the statistic of cases in India at any particular city in India .

Result and Discussion:

 To get all your travel information and planning at one place.

DISCUSSION AND CONCLUSION:

Here we conclude that the hidden gems of India website provide the facility that a tourist need to travel and organize a and plan a trip or vacation. Best website to land for the wanderlust people who looks for unknown and new places to travel and find peace in nature and history of India.

FUTURE WORK:
Working with third party free API also adding database and storing the data adding a public review section. Continuously keep adding new places and information developers come through. Also allowing visitors to suggest new places they discover.
